

Surtreat SurCoShield

Sidewalks - Driveways - Walkways - Pool Decks

SURCOSHIELD: is a multifunctional, single application, surface applied product that penetrates the surface of cementitious materials to seal porosity, repel water, and increase surface strength.

TESTED IN THE FLORIDA COAST FOR OVER 2 YEARS

Warm humid climates and the composition of concrete makes it a perfect environment for mold, algae and mildew to grow.

Concrete treated with SurCoShield will make your concrete resistant to mold, algae and mildew to grow.

We treated the top half of a paver block with SurCoShield and left the other half untreated, exposed to the elements of the Florida coast for 2 years and the results were incredible!

Treated

Untreated

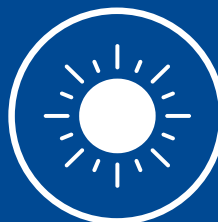

BENEFITS

- Keeps treated surfaces clean
- Penetrating formula
- Durable - will not discolor or be degraded by UV light.
- Provides for water repellent surface appearance
- Can be used on any stone, brick or cement bonded surface material such as building walls, roof tiles, pavers, sidewalks and pool decks.
- Does not create a slippery surface.
- Easy to apply - surface application method
- Environmentally friendly, water based formulation
